

Why does Berne Union need a One-to-One Program?

By increasing student access to technology at Berne Union, we can give students and educators access to information that they need to not only engage the students, but to transform the learning environment. In doing so, we maximize the educator's influence yet empower the student to be instrumental in their own education.

To advance the mission and vision of Berne Union Local School District and offer our students experiences to support their growth toward college and career readiness and global competence, we are providing each student (grade K-12) a Chromebook to be used throughout the day.

Reasoning behind this one-to-one program

- ★ Berne Union is contributing to 21st century learning by providing seamless access to technology. We are building a bridge from home to school by providing students with meaningful technology for use in both their "real life" and in the classroom setting.
- ★ Combining universal access to technology with Berne Union's high expectations for instruction quality will open doors for our teachers to better individualize students' learning.
- ★ This program provided students with a reliable computer at home.
- ★ It will make it a lot easier for everyone to complete homework and since the Chromebooks are small and portable, homework could be done virtually anywhere. This is critical for those who have a lot going on in their lives outside of school.
- ★ By learning to use the Chromebooks and submit assignments through a Learning Management System, Berne Union will be better equipped with necessary college skills.
